**Title:**

Demonstrating communication and understanding of math concepts.

**Learning Intention/Description of Learning Activity:**

The students were asked to create a video about a math concept to show their understanding. They needed to include a visual aid like a poster and a scripted dialogue to describe the necessary steps they would use to solve the question. In this scenario, students were to believe they were hired by a company to make a new learning video to demonstrate how to do a table of values.

**Learning Evidence**

- All
- Pictures
- Video
- Audio
- Documents

Video evidence will appear here.

There is no evidence to display for this assessment

**Teacher Comments/Feedback:**

You did very well during group discussion and collaborative activities where you took on a leadership role. You're able to clarify, restate and extend your group's discussion on the math topic. You contributed to planning and help to solve conflicts or challenges. You were able to clearly articulate your understanding in the video and showed a sense of humor.

**Next Steps:**

When communicating/creating a presentation you need to remember to slow down and practice what you were saying.

**Student Self Reflection:**

I like doing this activity because I was able to show what I know in a different way.
